Abstract

15 YEARS EXPERIENCES

In the last 15 years, Comprehensive Brain & Spine Center has performed surgical procedure in 506 cases of *Trigeminal Neuralgia* (Severe Facial Pain) and 630 cases of *Hemifacial Spasm* (Facial Twitch). The surgical technique used is keyhole surgery with *Microvascular Decompression* (MVD) method, the average operating time is 72 minutes with the length of stay of three days. Total of 96.25% (487/506) patients with *Trigeminal Neuralgia* are pain-free and 98.1% (618/630) *Hemifacial Spasm* patients are spasm free.

Complication rate of during this period 1,49% (17/1136). There are *Subdural Hemorrhage* 2 cases, *Subarachnoid Hemorrhage* 1 case, *Intracranial Hemorrhage* 2 cases, *Cerebrospinal Fluid* (CFS) leakage 6 cases, deafness 1 cases, facial flatness 5 cases but it was temporary and becoming normal after 6-10 weeks, no any infection case.
